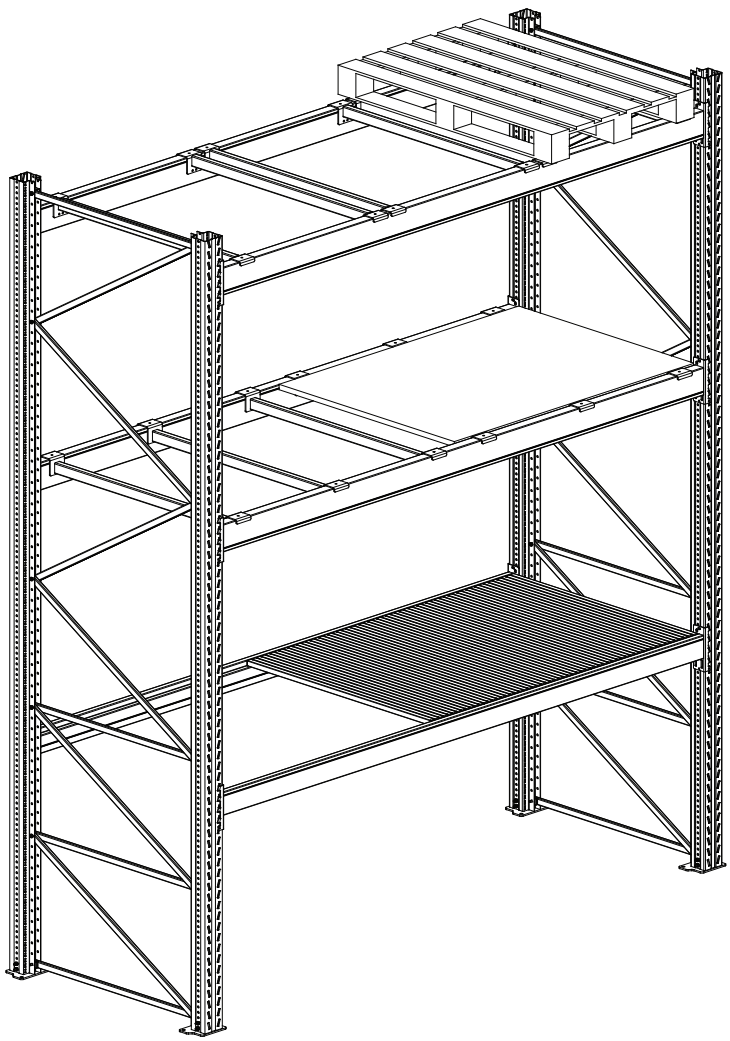
# СКЛАДСКОЕ СТЕЛЛАЖНОЕ ОБОРУДОВАНИЕ

## СТЕЛЛАЖ ФРОНТАЛЬНЫЙ
## ДЛЯ EUR И FIN ПОДДОНОВ

## СЕРИЯ G50



Компания Балттех
г.Санкт-Петербург
2009год

## ПОКРЫТИЕ - FINISHINGS

Стеллажи G50 покрываются эпоксиполиэфирной порошковой краской - самогасящимся и трудновоспламеняемым материалом, устойчивым к истиранию и механическим воздействиям.

Технология покраски включает в себя предварительную обработку деталей: обезжиривание и фосфатирование, в результате чего образуется фосфатная пленка, улучшающая сцепление поверхности металла с полимерами. Окраска производится электростатическим способом путем нанесения порошковых красок на металлические поверхности стеллажей.

Порошковая краска - самогасящийся и трудновоспламеняемый материал, устойчивый к истиранию и механическим воздействиям, не содержит в своем составе тяжелых металлов.

G50 series shelvings are coated with epoxy polyester powder coating which is self-extinguished and hardly inflammable material, resistant to wear and mechanical attack.

The coating technical process includes pretreatement of the parts: de-oiling and phosphate coating which results in a phosphate coat formed on the surface, due to this fact the adhesion of metal surface and polymers is enhanced. The electrostatic coating is used when the powder paint is applied on the metal surfaces of the shelving.

Powder coating is self-extinguished and hardly inflammable material, resistant to wear and mechanical attack and does not contain heavy metals.
